Iteration 1 Report

Iteration 1 is now being closed and this report will be a post mortem analyzing what went right and what went wrong in the project. Iteration 1's deliverables contained setting up the github, creating the project charter, creating the requirements document, and creating our project's effort estimation document.

For what went right, we were able to quickly establish a form of communication and were able to communicate clearly throughout the iteration. Additionally, all of our deliverables were posted on time. The assignments in the effort estimation were well defined and split up fairly among group members with requirements and constraints understood. We were able to find multiple times per week for the group to meet in person without many scheduling issues. The requirements document was well thought out and well organized.

For what went wrong, the project charter was completed on the incorrect document leading to several missed topics. Fortunately, there were not too many sections that we missed in the charter and have since been more careful to make sure that we are submitting the deliverables with regard to the rubrics that are posted. This is still a mistake that we need to make sure to be on the lookout for in future iterations of the project. Additionally, we lost points on the iteration 1 begin assignment for lacking a screenshot on the Trello board. The project manager spoke with the professor and was told that the Trello board was brought over from the previous semester and was not necessary this semester. This is another topic that needs to be addressed in future iterations. Other than that, all other major risks were successfully avoided for Iteration 1.
